

## IF YOU WERE MAKING WINE FOR THE FIRST TIME, WHAT WOULD YOU CHOOSE?

For hundreds of years and ironically still today, people have been using tree bark to seal a bottle of wine. Some fifty years ago, screw caps were introduced to the wine market. While proven to be a superior seal, the acceptance of screw caps was limited due to the mystique of the cork.

Tecnocap has designed a cap which not only provides the superior seal of a screw cap, it also maintains the traditional look of a corked bottle. ADVINTAGE™ brings to market the latest in screw cap technology with the industry's first all aluminum smooth-sided, pre-threaded closure utilizing a liner system that is made from Saranex™, a DOW product. The ADVINTAGE™ eliminates the threat of "cork taint" and premature oxidation.

ADVINTAGE™ has Patents Pending in Australia, and New Zealand and has a Registered Community Design Issued in the EU. ADVINTAGE™ was designed for use with a secondary tamper evidence system which completes the traditional look.

ADVINTAGE™ is available in different colors and can be printed with your logo or graphics (grapes, wine glass, bottle, etc.) for a custom look.

### Features and Benefits:

- EU Registered Community Design Issued
- US Patent Pending
- Allows easy resealing of wine bottles after opening.
- Dependable storage with the elimination of premature wine oxidation, which can occur with cork.
- Does not inhibit the aging process, but enhances the longevity of storage time with a better seal.
- No threads; a smooth, elegant finish.

These independent test results show the superior sealing capability of ADVINTAGE™.

Typical Oxygen Ingress for Wine Closures from Historical Data\*

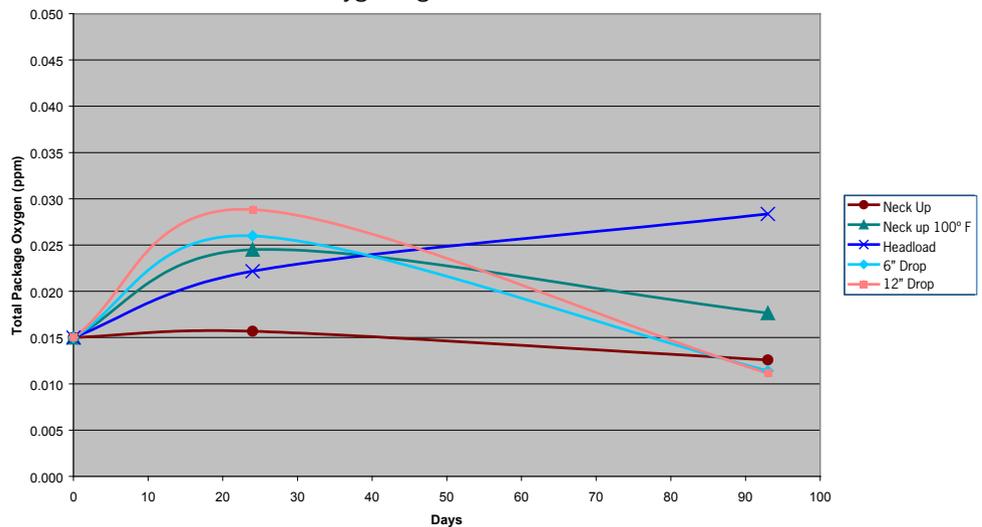

**Standard Size:**  
28/400 finish

**Packaging Applications:**  
Wine, spirits, olive oil, and extracts
